

# Usability Test Report: Poros

Fall, 2025

The Fun Team

**Kofi Baah Nyarko, Ruhama Getahun, Osemudianmen Aisuodionoe-Shadrach, Youssef Dalil**

The purpose of this test was to find out how users interact with our application and make required updates or changes according to the feedback received. Our test consisted of having the users explore the dashboard, add a job application, research target companies, upload and manage their resumes, and track their job-search progress and goals.

The results from the test and the developer team's plans to address their feedback and concerns are as follows:

- Users agreed the dashboard was clear and organized, though several felt the design was not visually compelling. Some mentioned that the welcome message looked unattractive and the layout felt unfamiliar.
  - The developers will refine the dashboard's aesthetics, update the welcome message, and adopt more modern UI patterns.
- All users successfully added a job application and found the process intuitive. One user praised the Quick Actions feature, while another suggested incorporating recognizable company logos to improve visual appeal.
  - The developers will explore adding company logos and strengthening visual elements in the job-application workflow.
- Users found the company research section informative and appreciated the interview-process details. Some wished for notifications when applications open and job recommendations for each company.
  - The developers plan to add optional notifications and expand company pages with recommended roles if time allows.
- The resume upload and AI-tailoring feature was highly praised, with some users saying they would use it daily. The most common request was to edit resumes directly within the app.
  - The developers will investigate adding an in-app PDF or text editor for customizable resume output.
- Users liked seeing their progress and goals, but several had difficulty locating where to edit the weekly application goal.
  - The developers will redesign the goal-editing interface to improve clarity and discoverability.

In general, users found Poros intuitive and helpful, with strong appreciation for resume tailoring and company insights. The main areas for improvement include dashboard visuals, goal-editing clarity, resume-editing capabilities, and optional notifications. Implementing these changes will enhance usability and user engagement.
